What is Anarchist Development DAO?

Anarchist Development DAO is geared toward the advancement of a more decentralized society. The goal is to provide the community with the means to fund projects without censorship from central authorities.

What is $ADD?

$ADD is the base token of the Anarchist Development DAO ecosystem and the main source of funding for the DAO. Creating transactions with $ADD will fill the DAO treasury slowly, subsidizing investments into decentralized technologies. The DAO wallet is directly funded by the tax collection on all $ADD transactions.

What are the $ADD Tokenomics?

There is a 5% tax on all buy and sell transactions. There is no fee for transfers. The DAO is funded by 3.5% of each transaction. The allotment for the marketing/dev/future development is 1% tax. Each transaction will supply the $ADD staking pool at 0.5%.

Is $ADD a Safe Investment?

As the founders of $ADD wanted Anarchist Development DAO to embody the very principals of Anarchy and decentralization while making the DAO TRULY autonomous, the DAO is not accessible unless the majority vote on a project is YES. Then and only then, will the funds be dispersed by the contract.

There are no team wallets and no tokens held in reserve which equates to 100% of the tokens minted being locked into liquidity.

The liquidity will be locked for a minimum of 2 years to start and will relock longer as milestones are met.

How can I purchase $ADD?

You can purchase $ADD on the Ethereum network from Uniswap.org. In the near future, it will be found on several CEX. Please check back for an updated listing.

ADD THE BUY WIDGET

What is $bADD?

When you stake $ADD tokens into the DAO, you will be given $bAdd as a proof-of-stake. $bAdd tokens can be exchanged for the same amount of $ADD you had originally staked at any time in addition to the rewards you earned by staking. The $bAdd tokens allow you to have voting rights on the proposals submitted to the DAO.

How Can I See my $bADD in my wallet?

$bADD can not be transferred or sold, and the only way to receive $bADD is by staking your $ADD. If you want to make sure you have $bADD so you are entitled to your voting rights, you can add the $bADD address to your wallet as you would any other token.

$bADD address: **FILL THIS IN**
The decimals are 9/18? YOU CAN FIND THIS OUT IN THE CONTRACT

Why Should I Stake My $ADD?

Staking your $ADD will entitle you to rewards dispersed from the buybacks either from approved projects or from the DAO wallet per transaction. Additionally, the only way to cast a vote is by staking. If you have an active proposal, you are unable to cast a vote.

Once a project has received the green-light, 2.5 ETH worth of tokens are purchased and dispersed to those who are staked along with the matching amount burned. When a proposal for a project is successful, the agreed upon percentage gifted to the DAO by the project is split 50/50.

How do I receive staking rewards?

After a proposal has been submitted and approved, the first step of the investment is to purchase 5 ETH worth of $ADD which are to be disbursed half as rewards while the other half is burned. In order to entice early stakers, buybacks will be performed from the DAO treasury and disbursed as rewards until the first project is chosen. If your $ADD is not in the staking pool prior to the buybacks or the choosing of the funded project no rewards shall be dispersed. When those rewards are paid to the DAO, they are distributed to stakers based on their percentage of the total pool. In addition, 0.5% of every transaction of $ADD funds the staking pool.

How to Stake $ADD

Navigate to the "Stake $ADD" page on the $ADD dApp (**dapp.fundanarchy.dao**). Enter the amount of $ADD you want to stake, Approve the transaction, and then complete the Deposit transaction within your MetaMask.

Add the $bADD address to your wallet to see your representation of $ADD staked. In the dApp, you will then see you have a balance in $bADD instead of $ADD.

What are ADD NFTs?

In order to submit a proposal you must have an ADD NFT. The NFTs will allow the individuals to put forth a proposal to the ADD DOA for the ADD community to vote on. One can obtain an ADD NFT by minting one of the limited 1500 NFT regardless of the tier, purchasing from another holder, or by getting a loan through our ADD loan system.

In order to be eligible to purchase an ADD NFT, you must burn 1,000,000 $ADD in order to reach the minting page. The ADD NFT will be minted in three tiers:
- **TIER I**: The price will be minted at 0.15 ETH. There will be 250 spots available. This is the cheapest price you will ever see and this tier will be achieved through a whitelist only. Interaction with our social media channels, as well as those who step up to lead the community will be rewarded. You can receive additional details on being whitelisted on Discord (add discord whitelist link here).
- **TIER II**: The price will be minted at 0.25 ETH. There will be 1000 spots available. The value of this NFT will always be equal to the amount awarded to the DAO as this is the reward given for a successful submission. The amount rewarded is 15 ETH.
- **TIER III**: The price will be minted at 0.5 ETH. There will be 250 spots available. This tier is for the latecomers, but is still affordable as the price will surely rise as these will be coveted as the only way to reach the money on the ADD DAO. Limited supply with a high demand!

DAO Proposals Requests:

Proposal requests for funding from the DAO should match the majority of the following criteria:

1. Protocols accepted and funded by ADD must include a 0.25% purchase $ADD & burn tax function within the token's smart contract serving into perpetuity by functioning as a way to keep funding innovation from ADD whereas previously funded projects create transactional volume. This incentivizes the voting community to consider the viability and security of the projects it approves as it will have a direct impact on the ADD NFTs and token value.
2. Further the cause of decentralized finance or fight against centralization.
3. Directly impact or benefit another noteworthy cause, scientific research not currently funded by government grants.
4. Any idea concurrent with the Anarchist ideals.

The DAO can then vote on whether they believe the investment should be granted. Once the ADD NFT proposal has been accepted, the NFT is burned. If the NFT was on loan, it is returned to the original owner.

What should be contained in the Proposal?

1. *The total number of tokens to be minted in the smart contract.*
2. *The percentage of the total supply being offered in return for 15 ETH investment. *This amount is calculated before the project's 5 ETH donation to the ADD DAO.*
3. *The tokenomics: This should include the mandatory 0.25 ETH tax for the ADD DAO.*
4. *The audit of the token and any contracts connected to said contract.*
5. *The burn and distribution plan of the tokens.*

Total Supply - Your token cannot have any mint functionality after the initial mint and the audit must prove this.

Percentage of total supply being offered in return for investment - If you have pre priced rounds then great, just calculate the percentage a 15 ETH purchase buys ADD at the price of the round you are raising for. It is up to the voters to decide what is approved, but the DAO is designed for pre-seed and seed rounds of funding and the price should reflect this.

The Tokenomics - You must provide details of where and who owns or is anticipated to own how much of your token and what price they paid for it. You must also provide vesting details, any TGE unlock & anything else that may impact the decisions of the DAO. If the DAO does not think your data is adequate then your proposal will be rejected, this could impact your chances of funding if you have to resubmit so please do make sure your numbers are clear. *This should include the mandatory 0.25 ETH tax for the ADD DAO.*

The audit of the token and any contracts if built - The full report should be submitted in the proposal for the token and also for any other contracts if applicable.

The burn and distribution plan - The burn and distribution plan is the vesting schedule for your protocol token. The vesting schedule can be daily, weekly, fortnightly or monthly distributions, but it cannot be vested over longer than 12 months at the very maximum.

I will write a section explaining how to use the dapp once i have the dapp
